5 Cable Diagram

The cable diagram shown below may be different from the cable diagram recommended by OMRON
Corporation. Please be assured there is no operational problem in applying the cable diagram shown in this
manual.

- The FG pin of the main body of the External Device must be D-class grounded. Please refer to the manual of
  the External Device for more details.
- SG and FG are connected inside the Display. When connecting SG to the External Device, design the system
  not to form short-circuit loop.
- Connect the isolation unit, when communication is not stabilized under the influence of a noise etc.
- When connecting IPC with External Device by RS-232C, the COM port which can be used changes with
  series. Please refer to the manual of IPC for details.
