# GP-PRO/PBIII for Windows Device/PLC CONNECTION MANUAL

# **Keyence Corporation PLC**

# Reading the GP-PRO/PBIII Device/PLC Connection Manual

This document is designed as an addition to the latest GP-PRO/PBIII for Windows Device/PLC Connection manual's Keyence Corporation data.

When connecting a Factory Gateway unit, please substitute the words "Factory Gateway" for this document's "GP/GLC/ST".

# 2.18 Keyence

# 2.18.1 System Structure

The following describes the system structure for connecting the GP to Keyence PLCs.

The Cable Diagrams mentioned in the following tables are listed in the section titled "2.18.2 Cable Diagrams".

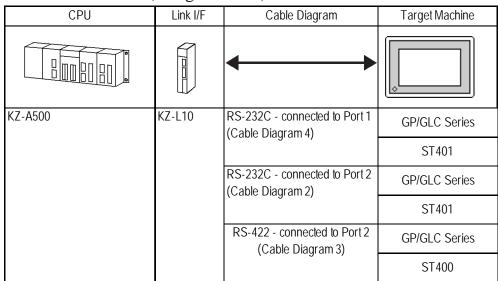

#### ■ **KZ-300/KZ-350 Series** (using Link I/F)

| CPU                     | Link I/F                     | Cable Diagram                | Target Machine |
|-------------------------|------------------------------|------------------------------|----------------|
|                         | PC Link<br>Unit              | <b>\</b>                     |                |
| KZ-300<br>KZ-350        | KZ-L2                        | RS-232C<br>Port 1 Connection | GP/GLC Series  |
|                         | (Cable Diagram 1)            | ST401                        |                |
| P<br>  ((<br>  R<br>  P | RS-232C<br>Port 2 Connection | GP/GLC Series                |                |
|                         | (Cable Diagram 2)            | ST401                        |                |
|                         |                              | RS-422<br>Port 2 Connection  | GP/GLC Series  |
|                         |                              | (Cable Diagram 3)            | ST400          |

Port 1 and Port 2 can be connected at the same time on the GP. When connected at the same time, the Communication Setup for Port 1 and Port 2 must be the same.

### **■ KZ-A500 Series** (using Link I/F)

Port 1 (RS232C), Port 2 (RS232-C or RS422) and the modular controller on CPU unit can be used at the same time.

# ■ **KZ-A500** (CPU Direct Connection)

| CPU     | Cables                  | Connector                  | Target Machine |
|---------|-------------------------|----------------------------|----------------|
|         | Modular Modular         |                            |                |
| KZ-A500 | Keyence Co.<br>OP-26487 | Keyence Co.<br>OP-26485 *1 | GP/GLC Series  |
|         |                         | Keyence Co.<br>OP-26486    | ST401          |

<sup>\*1</sup> The above CPU cannot be directly connected to GP2300/GP2301/GLC2300 series units because of the connector cover size. In this case, use Digital's CA1-EXCBL/D25-01 extension cable between the connector and the GP/GLC.

#### ■ Visual KV Series (CPU Direct Connection)

| СРИ                                | Cables                  | Connector                  | Target Machine |
|------------------------------------|-------------------------|----------------------------|----------------|
|                                    | Modular Modular Modular |                            |                |

| KV-40RW,KV-40T2W<br>KV-80RW,KV-80T2W                     |                         | Keyence Co.<br>OP-26486    | ST401            |

<sup>\*1</sup> The above CPU cannot be directly connected to GP2300/GP2301/GLC2300 series units because of the connector cover size. In this case, use Digital's CA1-EXCBL/D25-01 extension cable between the connector and the GP/GLC.

# ■ KV 1000 Series (Link I/F Connection)

<sup>\*2</sup> GP70 Series (except for GP377 Series units) and GLC100 Series units cannot be used.

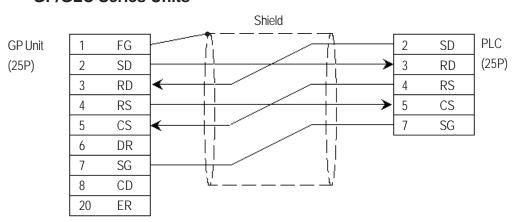

#### 2.18.2 Cable Diagrams

The cable diagrams illustrated below and the cable diagrams recommended by Keyence may differ, however, using these cables for your PLC operations will not cause any problems.

- Connect the FG line of the Shield cable to the GP.
- For the RS-232C connection, use a cable length less than 15m.
- If a communications cable is used, it must be connected to the SG (signal ground).
- For the RS-422 connection, refer to Keyence's PLC manual for the cable length.

# ST401 Unit

#### Cable Diagram 3 (RS-422)

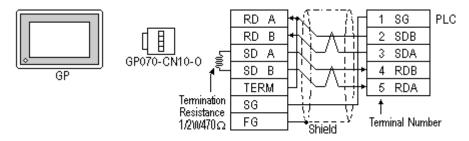

Turn the PLC's Termination Resistor switch ON.

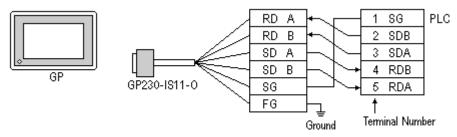

The reading of the A and B signals is reversed on the GP and PLC.

#### **GP/GLC Series Units**

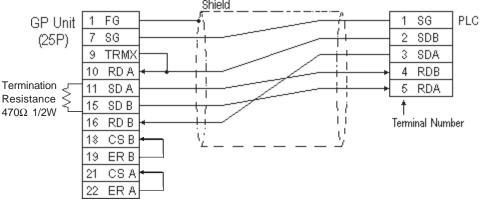

• When using Digital's RS-422 connector terminal adapter, GP070-CN10-0

• When using Digital's RS-422 Cable, GP230-IS11-0

• When making your own cable connections

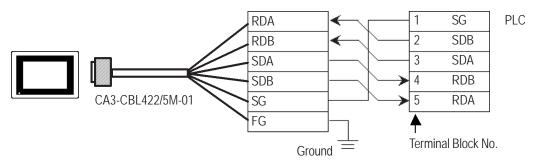

- Hirakawa Densen's H-9293A (C0-HC-ESV-3P\*7/0.2) is the recommended cable.
- When connecting the #9 and #10 pins in the GP Serial I/F, a termination resistance of  $100\Omega$  is added between RDA and RDB.
- When using RS-422 connection, please check the cable length with Keyence PLC User manual.

#### ST400 Unit

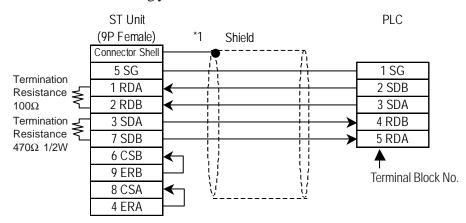

• When using Digital's RS-422 cable CA3-CBL422/5M-01

Be sure to connect the FG terminal to the ground. For information about Note: FG connections, refer to page 1-5 note \*1, in the "Connecting a Device/PLC to the ST unit."

When making your own cable connections

\*1 Be sure to connect the shield to the Connector Shell. For information about FG connections, refer to page 1-2 "RS422 I/F (ST400)" section's Note, in the "Connecting a Device/PLC to the ST unit."

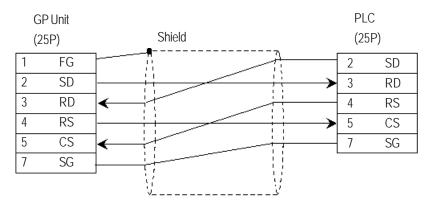

- Hirakawa Densen's H-9293A (C0-HC-ESV-3P\*7/0.2) is the recommended cable.
- When using RS-422 connection, please check the cable length with Keyence PLC User manual.

#### Cable Diagram 4 (RS-232C) Port 1

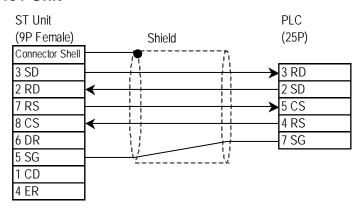

#### **GP/GLC Series Units**

- When using an RS-232C cable, the cable must be no longer than 15meters.
- When using an RS-422 cable, the cable must be no longer than 500meters.

#### Cable Diagram 7 (RS-422) 4-wire type

- The termination resistance on the PLC side becomes active when the Terminator Select switch on the unit is turned ON.
- The names of poles A and B are inverted between the GP and the PLC.
- The cable length should be within 500 meters.

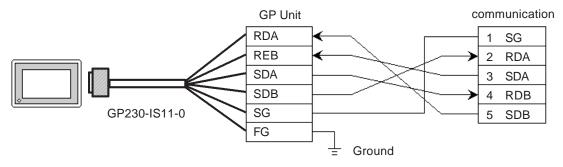

#### **GP/GLC Series Units**

When using Digital's RS-422 connector terminal adapter, GP070-CN10-0

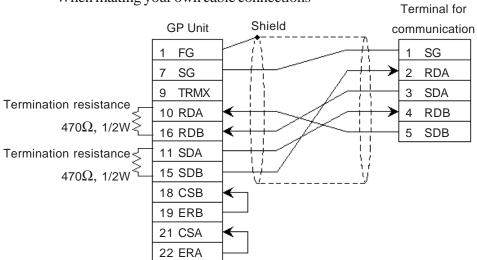

When using Digital's RS-422 Cable, GP230-IS11-0

<sup>\*1</sup> PLC or GP data writing is not possible.

<sup>\*2</sup> GP cannot write data to any address.

<sup>\*3</sup> Only available when the timer command and the counter command exist in the ladder program.

<sup>\*4</sup> The device range for the PLC is between DM0000 and DM19999, but addresses up to DM9999 are only accessible to the GP.

<sup>\*5</sup> Some addresses are not available for writes.

<sup>\*1</sup> Data cannot be written to the PLC or to the GP unit.

<sup>\*2</sup> Addresses must be specified using hexadecimal numbers.

<sup>\*3</sup> Some addresses are not available for writes.

<sup>\*4</sup> For addresses, only multiples of 16 may be specified.

<sup>\*5</sup> Only available when the timer command, the counter command, and the highspeed timer command exist in the ladder program.

<sup>\*6</sup> GP cannot write data to any address.

<sup>\*7</sup> Even if the file registers are registered as R50000 to R539999, similar device addresses can be used, e.g., R51111 = D51111.

The following table describes device names displayed when selecting GP-PRO/PBIII for Windows screen editor's KZ-A500 (Link) Protocol, and their corresponding KV-700 Series device names.

| KZ-A500 (LINK) Protocol                 | KV-700                                  |

<sup>\*1</sup> Data cannot be written to a device by either the PLC or the GP unit.

<sup>\*2</sup> Addresses must be specified using hexadecimal numbers.

<sup>\*3</sup> Some addresses are not available for writes. For details, please refer to your Keyence manual.

<sup>\*4</sup> Only available when the timer command, the counter command, and the highspeed timer command exist in the ladder program.

<sup>\*5</sup> Writing data from the GP will cause a Host Communication Error (02:06).

The following table shows the device display format used by GP-PRO/PBIII for Windows (KZ-A500[LINK]) and the equivalent format used for the KV-1000.

# ■ KZ-A500[LINK] protocol device ranges and KV-1000 device ranges.

| Device  | KZ-A500(LINK) Protocol | KV-1000            |
|---|------------------------|--------------------|
| Input Relay   | X(Y)0000 to X(Y)000F   | R00000 to R00015   |
| Output Relay  | X(Y)0050 to X(Y)0057   | R00500 to R00507   |
| Internal AUX Relay                                  | X(Y)0100 to X(Y)257F   | R01000 to R59915   |
| Internal AUX Relay                                  | M0000 to M8991         | MR00000 to MR56115 |

# Effect of PLC program on cycle time

If the KZ-A500 is connected directly to the CPU, the cycle time of the PLC program is delayed by about 8% after communication with the GP begins.

# ■ **KZ-A500** (using Link I/F)

| GF                             | <sup>o</sup> Setup | PLC                             | Setup                |

<sup>\*1</sup> The maximum band rate is 38400bps.

### ■ Visual KV/KV-700/KV1000 Series (CPU Direct Connection)

| GP                   | Setup           | PLC S | etup |
|----------------------|-----------------|-------|------|
| Baud Rate            | 19200bps        |       |      |
| Data Length          | 8 bits (fix ed) |       |      |
| Stop Bit             | 1 bit (fix ed)  |       |      |
| Parity Bit           | Even (fixed)    |       |      |
| Data Flow Control    | ER Control      |       |      |
| Communication Format | RS-232C         |       |      |
| Unit No.             | 0               |       |      |

- The KV/KV700 baud rates can be from 9600 to 57600 bps. The KV1000 baud rate can be from 9600 to 115200bps.
- The PLC requires no setup due to its automatic recognition of settings.

<sup>\*2</sup> When using an RS-232C cable on port 2, be sure to set the INTERFACE switch to "232C" (right side setting.) Also, set the TERMINATOR switch to OFF, since it will not be used.

<sup>\*3</sup> When using an RS-422 cable, set the INTERFACE switch to "422" (left side setting,) and the TERMINATOR switch to ON.

# ■ KV-700 Series (using the KZ-300 series protocol)

<sup>\*1</sup> The maximum baud rate is 115,200 bps.

# ■ KV Series (CPU Direct Connection)

| GP Setup             |                 | PLC S | etup |
|----------------------|-----------------|-------|------|
| Baud Rate            | 19200bps        |       |      |
| Data Length          | 8 bits (fix ed) |       |      |
| Stop Bit             | 1 bit (fix ed)  |       |      |
| Parity Bit           | Even (fixed)    |       |      |
| Data Flow Control    | ER Control      |       |      |
| Communication Format | RS-232C         |       |      |
| Unit No.             | 0 (fix ed)      |       |      |

- The baud rate can be from 9600 to 38400 bps.
- The PLC requires no setup due to its automatic recognition of settings.
- If your ladder program is currently stopped and you attempt data transfer at 38400 bps, a communication error can occur. If it does, either change to RUN mode, or use a different communication speed.

<sup>\*1</sup> Baud rate can be set as high as 115,200bps.

• Data transfer port 1 is fixed at RS-232C.

Communication Port 2 can be set to either RS-232C or RS-422A/485. Use the selector switch on the side of the unit to set the communication format.

#### 2.18.5

#### **Error Codes**

#### **■PLC Error Codes**

Controller error codes are indicated by the "Host communication error (02:\*\*)", and appear in the left lower corner of the GP screen. (\*\* stands for an error code.)

#### ◆Visual KV/KV-700 Series/KV1000 (CPU Direct Connection)

<PLC Error Code>

| Error Code | Description  |
|------------|--|
| 02         | Occurs when you write to a device that cannot be written to. (High Speed Counter Comparator (contact)) |
| 04         | Occurs when the PLC uses an unsupported baud rate to send data.  |
| 31         | Occurs when an undefined device is accessed. *1  |

<sup>\*1</sup> When writing to a Timer (contact/current value/set value), Counter (contact/current value/set value), High Speed Counter, High Speed Counter Comparator (set value), these values must be set in advance using a Ladder Program.

#### **♦KV Series** (CPU Direct Connection)

<PLC Error Code>

| Error Code | Description  |
|------------|--|
| 02         | A ladder program has not yet been set up in the PLC.   |
| 04         | A Device was accessed that has not yet been defined.   |
| 13         | Setting values were attempted to be changed for a write-protected program's Counters, Timers, and High-speed Counter Comparator. |
